

ConsumerVPN Client for macOS 10.11+

Getting Started Guide

1. Open the build settings for the project
 - a. Change your Bundle Identifier to a unique value
 - b. Select your Signing Identity

2. Select "Build Phases"

- a. If you have a demo account, enter your username, password, and api key into the placeholder values.
 - b. If you do not have a demo account yet, check the box "Run script only when installing"
3. Open the Theme.swift file and replace the following values:
 - a. productName
 - b. brandName

- c. forgotPasswordURL
 - d. contactSupportURL
 - e. usernameSuffix
 - f. apiKey
4. Customize the colors in Theme.swift
 5. In the Theme folder there is an asset catalog called “Assets.xcassets”. We have provided an icon to be used in the server list for “best available”. Feel free to replace this image with one of your own choosing. This icon will be shown at the top of the server list to allow the user to instruct the app to automatically choose the best server based on their location and the current load on the network.
